

*The Alliance Center is a WELL Health-Safety rated building. This guide is one part of a 21 part series highlighting the various features our facility accomplishes to make it a healthier and safer place for our occupants and visitors.*

# DEVELOP LEGIONELLA MANAGEMENT PLAN

## FEATURE OVERVIEW

The intent of this feature is to **implement protocols to reduce risk of Legionella colonization.**

Legionella bacteria is naturally present in waters at low concentrations, but it may colonize recirculated water systems and can cause lung disease and worse if contaminated water is ingested by an individual.

## HIGHLIGHTS OF WHAT WE'VE DONE

### TEST WATER QUALITY

We test the quality of water in our building annually for Legionella and other contaminants.

### IDENTIFIED WATER FEATURES

Identified a list of all water features throughout our facility to ensure they were all accounted for and tested appropriately.

### ASSESS WATER SYSTEMS

Conduct monthly or annual assessments of all water systems for appropriate operations.

## BENEFITS

Implementing a proper Legionella management plan should reduce the risk of exposure to pathogenic bacteria.
